# Organisation Validation (OV) SSL
GlobalSign OrganizationSSL Certificates

Professional certificates with true 128bit - 256bit encryption for higher levels of trust

Security and trust are essential when you're operating an online business. In times of increased phishing attacks and identity theft, your customers rely on you to secure sensitive information sent over the Internet with the strongest encryption level available, provided by the most credible security providers.

Organisation Validated (OV) Certificates activate the "little yellow padlock" and secure your ecommerce transactions, logins, webmail, network traffic and online services with unsurpassed levels of authentication, integrity, confidentiality and non-repudiation.

The publicly trusted OV Certificate activates the yellow padlock and connects over https. Website visitors also see your vetted company details in the Certificate itself.

Full company vetting enhances user confidence

Your company's existence is verified through third party databases and your company documentation. OrganizationSSL Certificates ensure a high level of customer trust as your company name and address are included within the Certificate itself.

Secure your transactions and let your customers know you have been vetted to a professional standard for a higher level of trust and credibility in your online brand. Customers will have more confidence to do business with you, which will increase your conversions and ultimately your revenues.

Why should my company use OV SSL?

• Strong future-proof SSL security to protect data sent via the Internet
• Full company vetting to enhance the levels of trust in your website - your visitors see that the site is owned by a legitimate company
• Cost effective SSL from a security name trusted by millions since 1996.

OrganizationSSL - The GlobalSign Difference

WebTrust compliant CA since 2002 (one of the longest serving one in the world), and a member of the Anti-Phishing Working Group, GlobalSign has been issuing Organization Validation certificates for over 10 years, complete with unique features:

Unique Certificate features

• Activate the yellow padlock and clearly shows your Company Name and details
• 2048 bit future proof security with every SSL Certificate
• Universal Compatibility with all browsers and devices
• Secures both www and non-www domains at no extra cost
• Free secure site seal
• Unlimited server licenses
• Unlimited reissues for the lifetime of the certificate
• $1,250,000 underwritten warranty

Wildcard Option

• Order a certificate for *.domain.com and secure an unlimited number of subdomains on your domain name with a single SSL Certificate
• Simplifies the addition of further secure subdomains and eases SSL management
• Save time and money

Subject Alternative Names (SAN)

• Allows up to 100 domain or server names to be secured using the same single Certificate
• Includes any combination of domain names, subdomains, IP addresses and localhost names
• Supports Unified Communications applications
